VALERIE JEWELS

Official Website URL Inventory & Meta Pixel Audit Report

Domain: https://valeriejewels.in | **Meta Pixel ID:** 1574336098052134 | **GTM Container:** GTM-TR5Q727Z | **Date:** November 4, 2026

Executive Summary & Problem Statement:
The Meta Events Manager and ad dashboard are reporting **'Purchase' events on https://valeriejewels.in/** despite the store having no actual completed orders. Furthermore, Meta diagnostics flagged: *'Currency field is missing'* and *'value and currency parameters are missing on https://valeriejewels.in/'*.

Core Finding: The website's source code does **NOT** fire Purchase events on regular page visits. Instead, the phantom purchases are triggered by **Meta's Automatic Event Detection (Autotrack)** and/or **Google Tag Manager click triggers** misidentifying storefront button clicks ('Order 1-Click', 'Buy Now', 'Proceed to Bag') as purchase conversions. Below is the full URL directory for audit, followed by the exact step-by-step fix.

SECTION 1: Official Website URL Directory

Use these verified URLs to test events via the **Meta Pixel Helper Chrome extension**, the **Meta Events Test Tool**, and **Google Tag Manager Preview Mode**.

1.1 Core Storefront & Category / Collection URLs

Category / Page	Primary Live URL	Aliases / Sitelinks Handled
Homepage & Main Store	`https://valeriejewels.in/`	/, #store, /#catalog
Jhumka Boxes (Hero)	`https://valeriejewels.in/jhumka-boxes`	/jhumkha-box, /jhumka-box, /collections/jhumka-boxes
Mystery Jar Collection	`https://valeriejewels.in/mystery-jar`	/collections/mystery-jar, /mystery-jewellery-jar
Necklaces	`https://valeriejewels.in/necklaces`	/collections/necklaces, #necklaces
Rings	`https://valeriejewels.in/rings`	/collections/rings, #rings
Bracelets	`https://valeriejewels.in/bracelets`	/collections/bracelets, #bracelets
Combos & Gift Sets	`https://valeriejewels.in/combos`	/collections/combos, #combos
Earrings (Legacy)	`https://valeriejewels.in/earrings`	Automatically redirects/routes to /jhumka-boxes

1.2 Direct Product Detail Pages (PDP)

Product Name	Direct SEO Clean URL	Price
Valerie Signature Mystery Jewellery Jar	`https://valeriejewels.in/mystery-jewellery-jar`	Rs. 999 - 4,999
16 Pairs Oxidized Silver Earrings Set	`https://valeriejewels.in/16-pairs-oxidized-silver-earrings-set-for-women-traditional-indian-ethnic-jhumka-dangle-earrings`	Rs. 999
The Royal Noor Jhumka Box (6 Pair Festive)	`https://valeriejewels.in/royal-noor-jhumka-box`	Rs. 899
The Gulabi Mehal Pastel Jhumka Box	`https://valeriejewels.in/gulabi-mehal-pastel-jhumka-box`	Rs. 899
The Shahi Kundan Chandbali & Jhumka Box	`https://valeriejewels.in/shahi-kundan-chandbali-box`	Rs. 899
The Roohani Daily Wear Jhumka Box	`https://valeriejewels.in/roohani-daily-wear-jhumka-box`	Rs. 899
Aurelia 18K Solitaire Pendant Necklace	`https://valeriejewels.in/aurelia-solitaire-necklace`	Rs. 799

1.3 Transactional, Conversion & Support URLs

Page Type / Purpose	Live URL Pattern	Intended Tracking Trigger
Order Confirmation	`https://valeriejewels.in/order-confirmation/:order_number` *(e.g. /order-confirmation/VJ-10492)*	**ONLY place Purchase event should ever fire** (requires verified order ID, INR currency, and numeric value)
Order Incomplete / Failed	`https://valeriejewels.in/order-failed/:order_number`	Payment retry / COD conversion funnel; no purchase event
Live Order Tracking	`https://valeriejewels.in/track-order` `https://valeriejewels.in/track/:order_number`	Post-purchase tracking; general pageview
Contact Us	`https://valeriejewels.in/contact-us`	Lead / Contact event
Frequently Asked Questions	`https://valeriejewels.in/faqs`	General pageview
Shipping & Delivery Policy	`https://valeriejewels.in/shipping-policy`	General pageview
Return & Refund Policy	`https://valeriejewels.in/refund-policy`	General pageview
Privacy Policy	`https://valeriejewels.in/privacy-policy`	General pageview
Terms & Conditions	`https://valeriejewels.in/terms-and-conditions`	General pageview
Admin Portal	`https://valeriejewels.in/vj-manage-x1126`	Authenticated internal dashboard; exclude from ad metrics

SECTION 2: Technical Audit — Why Fake 'Purchase' Events Are Triggering

Our deep codebase inspection confirms that **no Purchase event is fired by our website script on https://valeriejewels.in/**. The phantom conversions are caused by external tracking configurations detailed below:

PRIMARY CULPRIT: Meta's 'Track Events Automatically Without Code' (Autotrack)
What is happening: Meta Pixel has an AI-driven feature called *Automatic Event Detection*. When enabled in Meta Events Manager, Meta's script automatically scans web pages for buttons with words like **'Order'**, **'Buy Now'**, **'Get My Jar'**, **'Complete'**, or **'Proceed'**. Whenever any shopper clicks these buttons on **https://valeriejewels.in/** to open the cart or checkout modal, Meta's bot automatically logs a **Purchase event**!

Why this explains the marketer's error: Because Meta's bot is guessing from a simple button click on the homepage, it has no order amount or currency data. Hence Meta Diagnostics reports: *'value and currency parameters are missing on https://valeriejewels.in/'*.

SECONDARY CULPRIT: Google Tag Manager (GTM-TR5Q727Z) Misconfigured Triggers
What is happening: Your website loads GTM container GTM-TR5Q727Z in the header. If someone in the marketing agency configured a Meta Pixel Purchase tag in GTM and attached it to a trigger like *'All Clicks'*, *'Click URL contains...'*, *'Element Visibility'*, or *'Page View on /'*, GTM sends a Purchase event to Meta every time that trigger fires, without waiting for actual payment confirmation.

TERTIARY CULPRIT: Meta Event Setup Tool Point-and-Click Rules
What is happening: In Meta Events Manager, an agency marketer might have opened the visual *Event Setup Tool* on https://valeriejewels.in/ and clicked on the '1-Click Fastrr' or 'Proceed' button, mapping that click to 'Purchase'. Those point-and-click rules persist in Meta's cloud even after code changes.

SECTION 3: Actionable Fix Instructions for Marketer / Store Admin

Follow these 4 simple steps to eliminate fake Purchase events and restore 100% data accuracy:

STEP 1: Turn OFF 'Track Events Automatically Without Code' in Meta Events Manager
1. Open **Meta Events Manager** (https://adsmanager.facebook.com/events_manager2).
2. Select your Pixel / Dataset: **1574336098052134**.
3. Click on the **Settings** tab at the top.
4. Scroll down to the **Event Setup** section.
5. Find **'Track Events Automatically Without Code'** (Automatic Event Detection) and **toggle it OFF**.

This immediately stops Meta's AI bot from guessing and logging button clicks as purchases!

STEP 2: Delete Any Point-and-Click Purchase Rules in Meta Event Setup Tool
1. In the same **Settings** tab under **Event Setup**, click **'Open Event Setup Tool'**.
2. Enter your website URL: https://valeriejewels.in/ and click **Open Website**.
3. In the floating dialog on the top left, view **'Events on this page'**.
4. If you see **Purchase** mapped to any button (like 'Order Now' or 'Shop Now'), click the **Trash/Delete** icon.
5. Click **Finish Setup**.

STEP 3: Audit Triggers in Google Tag Manager (GTM-TR5Q727Z)
1. Open **Google Tag Manager** (https://tagmanager.google.com/).
2. Open container: **GTM-TR5Q727Z**.
3. Click **Tags** in the left navigation.
4. Search for any Tag named *'Meta Pixel - Purchase'*, *'FB - Purchase'*, or *'CAPI Purchase'*.
5. Check its **Trigger**: It should **ONLY** fire on:
   - Custom Event: purchase, OR
   - Page View: Page URL contains /order-confirmation/.
6. If the trigger is set to *'All Clicks'*, *'Click Classes'*, or *'All Pages'*, **remove that trigger immediately**.
7. Click **Submit & Publish** the new GTM container version.

STEP 4: Verify with Meta Pixel Helper Extension
1. Install the official **Meta Pixel Helper** extension in Google Chrome.
2. Visit https://valeriejewels.in/, browse products, open cart drawer, and click 'Proceed'.
3. Look at Meta Pixel Helper: You should only see **PageView**, **ViewContent**, or **AddToCart**.
4. Verify that **Purchase** does **NOT** fire anywhere until an actual order is successfully confirmed!

Summary & Verification:
This audit report provides all necessary live endpoints and technical remedies. Once Step 1 and Step 2 are completed in Meta Events Manager, the fake Purchase notifications and missing currency diagnostics will resolve completely.
